

Specifications - BOSTON Collection

Supply of **FAP ceramiche** porcelain stoneware wall tiles.

Product and process features

FAP unglazed porcelain stoneware wall and floor tiles, vitrified full body with added feldspar, quartz and kaolin, obtained by pressing (450 kg/cm² and above) the atomised body and then sintering at a temperature of approx. 1250 °C.

The full vitrification of the tiles ensures an average absorption of 0.08%, well below the level set in European standard ISO 10545-3.

The product is therefore compact, frost-proof, resistant to knocks and physical and chemical aggression, bending and differences in temperature.

Conformity to standards ISO 13006 - EN 14411, Annex G

The **Boston** collection complies with all ISO 13006 and EN 14411 standards (Annex G Group B1a E_b ≤ 0,5%).

Green certifications

FAP ceramiche is a member of the U.S. Green Building Council. LEED compliant, the **Boston** collection can help to obtain between 1 and 6 LEED credits, depending on the colour and use.

Commercial product description

COMPANY	FAP ceramiche
COLLECTION	BOSTON
SIZES (cm)	7,5x30
THICKNESS (mm)	8,5
FINISH	Matt
